

iOS Machine Coding Round — Twitter Feed

Section 1 — Candidate Brief

The Task

Build a **Twitter-style feed screen** for iOS.

- **Duration:** 120 minutes
- **Language:** Swift (SwiftUI)
- **Setup:** Bring your Mac with Xcode. The feed endpoint will be mocked - <https://example.com/feed>

We are **not** judging visual polish or pixel-perfect UI. Use system defaults — focus on building a working, reliable app.

What the App Should Do

Imagine a user opens your app on a busy commute — sometimes on Wi-Fi, sometimes on patchy mobile data, sometimes in a tunnel with no signal at all. Your app should feel solid in every one of those situations.

Features

1. **A scrollable feed of tweets.** Each tweet shows the author's name, handle, profile picture, the tweet text, when it was posted, and like / retweet counts. If a tweet has an image attached, show it.
2. **Loads more as the user scrolls.** New tweets appear at the bottom as the user keeps scrolling — no manual "load more" button.

3. **Pull down to refresh.** Pulling down at the top of the feed reloads the latest tweets.
4. **Works without internet.** If the user opens the app and the device is offline, they should still see the tweets they had the last time the app loaded successfully — not a blank screen or a generic error.
5. **Survives a flaky network.** If a request fails because of a slow or intermittent connection, the app should recover on its own when possible — without the user having to do anything, and without freezing the screen.
6. **Shows the right state at the right time.** Loading, empty feed, and error states should each look distinct so the user always knows what's happening.
7. **Images load smoothly.** Profile pictures and attached images shouldn't reload every time the user scrolls past them.

The Feed Endpoint

GET /feed

Returns a paginated list of tweets.

Query params

- `cursor` (*string, optional*) — pagination cursor for the next page
- `limit` (*int, default 20*)

Response

```
{
  "tweets": [
    {
      "id": "t_001",
      "author": {
        "id": "u_42",
        "handle": "@jane",
        "displayName": "Jane Doe",

```

```
    "avatarUrl": "https://..."
  },
  "text": "Hello world",
  "createdAt": "2026-04-28T10:30:00Z",
  "likeCount": 12,
  "retweetCount": 3,
  "mediaUrl": null
}
],
"nextCursor": "abc123"
}
```
